DESCRIBE SAFEGUARDS TO ADDRESS THESE ADDITIONAL HAZARDS: --

HAVE ALL EQUIPMENT, PRE-SHIFT INSPECTIONS AND SAFETY CHECKS BEEN COMPLETED?: YES

HAVE ALL TECHNICIANS REVIEWED THE JSA AND VERIFIED THE PROPER PPE AND SAFEGUARDS?: YES

GENERAL SERVICE WORK

Service Performed

Arrived on site, met with contact, examine work area, filled out jsa, and briefed coworker. After jsa was completed new hoists were unloaded and brought into the building via rented telehandler and brought to work area. Technicians then used customer provided scissor lift to gain access to the wiring panels of each hoist and examined where wires were terminated to aid in the wiring of new hoists. After completing this technicians unwired the existing hoists and used telehandler to remove them from the bridge girder to the ground. New hoists were then assembled on the ground and placed on pallet to hang them from bridge girder. After placing the hoists on the girder the technicians consulted the wiring diagrams and pictures of previous wiring to begin wiring in new hoists.

GENERAL SERVICE WORK

Service Performed

Arrived on site, examined work area, filled out jsa. Completed wiring of hoists. After completion hoists covers were installed and hoists were limit and operation tested. After ensuring satisfactory operation hoists were ran for a period of roughly 20 minutes and a pick was made to ensure hoists could handle designed work. Technician cleaned work area and gave contact all related paperwork of hoists and factory load test certifications.
